Past performance is no guarantee of future results and is not constant over time.

Performances are calculated by comparing the net asset value at the end of the period to that at the beginning of the period. The figures shown are calculated in the reference currency of the share class. They are calculated after deduction of all charges, with the exception of any entry/exit charges. Net figures do not take account of taxes applicable to the average retail individual client in their country of residence. When the currency shown differs from the client's currency, there is a currency risk that can result in a decrease in value.

KEY DATA

Net asset value	1,947.45 EUR
Net Asset Value Date	31/01/2025
Assets under management (AUM)	15.25 (million EUR)
ISIN codes - Income appropriation	MC0010000172 - Accumulation
Max entry fee	4.00%
Max redemption fee	0.00%
Management fee max.	1.80%

NET PERFORMANCE OVER FIVE YEARS OR SINCE FUND LAUNCH

VOLATILITY BY ROLLING PERIOD AS AT 31/01/2025

	1 year	3 years	5 years
Portfolio	9.9%	12.4%	16.6%
Benchmark	10.5%	13.0%	-

Volatility is a statistical indicator that measures the magnitude of changes in an asset around its average.

MANAGEMENT TEAM COMMENT

For once, European equities started the year better than Wall Street. In January, the Stoxx 600 gained 6.3% while the S&P 500 gained 2.7%. Chinese indices were under pressure overall (CSI 300 at -2.99%) and emerging equities rose slightly (MSCI Emerging Markets at +1.66%). In particular, European equities were led by technology and luxury, two sectors with a high index weighting. The excellent results published by SAP, ASML and Richemont supported all stocks in these sectors. The Nasdaq "only" gained 1.64%, penalised by the fall of Nvidia following the emergence of Chinese company Deepseek, whose artificial intelligence model is said to have obtained results as good as those of Nvidia and Meta. At the beginning of the month, favourable macroeconomic data in the United States (ISM index and the labour market) added to concerns about the impact of Donald Trump's policy on the economy to accelerate tensions on the fixed income markets that have been underway since December. Investors therefore significantly lowered their expectations of rate cuts by the Fed, which started the year with a pause. At the same time, the ECB cut its rates by 25bp at the end of the month, reinforcing the strength of the dollar, which ended the month at 1.0362 against the euro. Gold continued its rise with a rebound of 5.29% over the month to \$2800/oz, while the WTI jumped to \$80 in mid-January, returning to December levels at the end of the month on fears about future demand, particularly following a decline in Chinese manufacturing activity in January. In terms of allocation movements, we reduced our exposure to European sector themes (Automobiles and Oil & Gas) given the current sector volatility that makes us prefer more index-based positions for the moment (increase of 5% in the Eurostoxx 50 tracker position and 2% in the MSCI Europe tracker). The European MidCap position was also sold as the recent performance was disappointing and activity indicators in Europe remained weak.
